

Helios Compute Control

RECOMMENDATION

HOLD

Hold because the selected unreviewed synthetic catastrophe prior is 20.00% versus the separate 10.00% Desk loss ceiling. In this retained structure every catastrophe path falls below 1.0x, while the seeded replay frequency of 20.00% is a generator check rather than an independent estimate. The proposed milestone financing is a path to reconsideration, not a current investment recommendation.

DECISION REQUESTED

HOLD under the selected synthetic prior and Desk-owned draft loss maximum. Do not authorize funding while diligence remains unresolved; reopen only after human IC review of the risk specification and new evidence.

The selected analyst catastrophe prior is 20.0% versus a 10.0% Desk loss ceiling. Every catastrophe path loses in this retained structure; the replay checks the generator rather than estimating the input.

SELECTED CATASTROPHE PRIOR

20.0%

Desk ceiling 10.0%

FIRST CLOSE

\$25M

13.51% after close and pool refresh

CONDITIONAL TRANCHE

\$15M

Month 12; evidence gated

CONDITIONAL UPSIDE

56.3%

8.2x; not approval

The selected prior exceeds the Desk ceiling

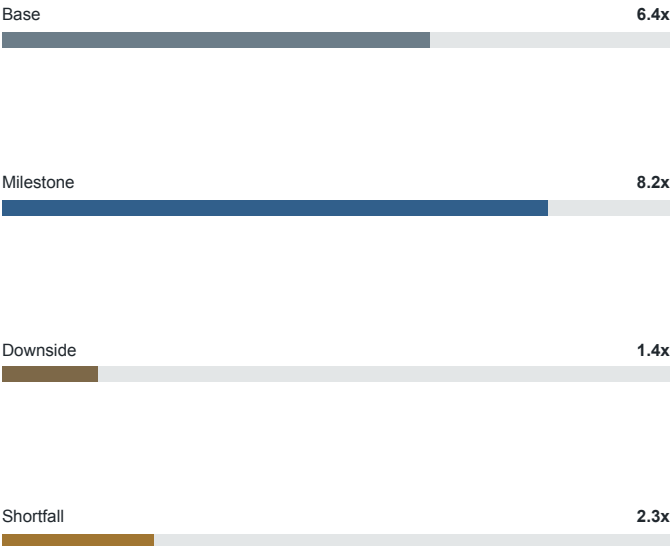

[Maximum 10.0%](#)

Helios growth investment screening profile; DRAFT

Returns depend on the financing path

Gross MOIC; scenario outputs are conditional, not forecasts

What must be true before advancement

Selected catastrophe prior exceeds policy maximum

Illustrative investment committee

Hold because the selected analyst catastrophe prior exceeds the separate Desk loss ceiling. In this retained structure every catastrophe path loses; the seeded replay checks the path generator rather than estimating the input. Do not revise the prior or policy after observing the result; alternatives remain unreviewed what-if sensitivities.

Reconcile pipeline stage history

Revenue operations diligence lead

Do not credit forecast conversion until the complete opportunity history is reconciled.

Test ordinary-customer transferability

Commercial diligence lead

Remove pooled-retention credit if design-partner and ordinary-customer terms are not comparable.

Path to reconsideration

1. Illustrative \$25M first close + \$15M conditional tranche
2. \$160M pre-money; 12% post-financing unissued pool
3. 1x non-participating Series C; pre-money holders bear pool refresh

The 1,000 paths replay declared synthetic scenario priors. They do not estimate real-world investment accuracy.

Human IC approval required. No capital action is authorized.
