## Sampling precision

These standard errors describe finite simulation sampling error only. They do not measure investment-model accuracy or real-world forecast uncertainty.

• Probability below 1.0x: Monte Carlo SE 1.26 pp (1,000 draws).

## Reproducibility boundary

---

All data and results are synthetic. Exact arithmetic, source locators, scenario receipts, and deterministic generation establish internal reproducibility only. They do not establish live-deal accuracy, investment approval, or real-world performance.
