

Helios Compute Control

RECOMMENDATION

HOLD

Hold because, under the canonical unreviewed synthetic prior, 20.00% of retained paths fall below 1.0x versus the illustrative 10.00% policy maximum. This result is driven by the explicit catastrophe-state assumption; the proposed milestone financing is a path to reconsideration, not a current investment recommendation.

DECISION REQUESTED

HOLD under the selected synthetic prior and Desk-owned draft loss maximum. Do not authorize funding while diligence remains unresolved; reopen only after human IC review of the risk specification and new evidence.

Modeled probability below 1.0x is 20.0% versus a 10.0% maximum. Conditional upside does not override the failed gate.

MODELED LOSS RISK

20.0%

Maximum 10.0%

FIRST CLOSE

\$25M

13.51% ownership

CONDITIONAL TRANCHE

\$15M

Month 12; evidence gated

CONDITIONAL UPSIDE

56.3%

8.2x; not approval

The Desk-owned draft gate fails

Helios growth investment screening profile; DRAFT

Maximum 10.0%

Returns depend on the financing path

Gross MOIC; scenario outputs are conditional, not forecasts

What must be true before advancement

Loss hurdle exceeds policy maximum

Illustrative investment committee
Hold under the canonical synthetic prior. Do not revise the prior or policy after observing the result; alternative values remain unreviewed what-if sensitivities.

Reconcile pipeline stage history

Revenue operations diligence lead
Do not credit forecast conversion until the complete opportunity history is reconciled.

Test ordinary-customer transferability

Commercial diligence lead
Remove pooled-retention credit if design-partner and ordinary-customer terms are not comparable.

Path to reconsideration

Illustrative \$25M first close + \$15M conditional tranche; \$160M pre-money; 12% post-financing unissued pool; 1x non-participating Series C; pre-money holders bear pool refresh.

The 1,000 paths replay declared synthetic scenario priors. They do not estimate real-world investment accuracy.

Human IC approval required. No capital action is authorized.
