

AtlasGrid Systems - technical appendix

Illustrative synthetic case - not investment advice

This appendix retains reproducibility records, raw identifiers, mappings, and formula definitions. It is not the investment-committee front page.

Sampling precision

These standard errors describe finite simulation sampling error only. They do not measure investment-model accuracy or real-world forecast uncertainty.

- Probability below 1.0x MOIC: Monte Carlo SE 0.85 pp (1,000 draws).
- Modeled covenant-breach probability: Monte Carlo SE 0.17 pp (1,000 draws).
- Modeled payment-default probability: Monte Carlo SE 0.00 pp (1,000 draws).

Reproducibility boundary

All data and results are synthetic. Exact arithmetic, source locators, scenario receipts, and deterministic generation establish internal reproducibility only. They do not establish live-deal accuracy, investment approval, or real-world performance.
