

Helios Compute Control - one-page IC snapshot

SYNTHETIC - NOT INVESTMENT ADVICE

HOLD

Hold because the scenario-weighted probability below 1.0x is 20%, above the binding 10% maximum. The proposed milestone financing is a path to reconsideration, not a current investment recommendation.

Decision economics

MEASURE	RESULT	BASIS
Fully funded ownership	20.0%	\$25M close + \$15M contingent on \$160M pre-money
Ordinary-cohort NRR	117.1%	Pooled with design partners: 135.4%
Blended gross margin	70.6%	LTM, including telemetry and support
Runway	17.3 mo	Burn multiple: 0.8x
Modeled serviceable spend	\$20.9B	90% tier intervals; tier 5 abstained

What blocks advancement

- 6 blocking issues, including 1 failed quantitative hurdle(s).
- **Loss hurdle exceeds policy maximum** - Deal lead; pre ic. Hold. Do not revise the prior or hurdle after observing the failure; reconsider only after independent approval of an evidence-supported risk specification or replacement deterministic stress policy.
 - **Reconcile pipeline stage history** - Revenue operations diligence lead; pre ic. Do not credit forecast conversion until the complete opportunity history is reconciled.
 - **Test ordinary-customer transferability** - Commercial diligence lead; pre signing. Remove pooled-retention credit if design-partner and ordinary-customer terms are not comparable.
 - **Reconcile provider unit costs** - Technical and financial diligence leads; pre ic. Do not release milestone capital until margin improvement ties to invoices and telemetry.

Path to yes

- Illustrative \$25M first close + \$15M conditional tranche
 - \$160M pre-money; 12% post-financing unissued pool
 - 1x non-participating Series C; pre-money holders bear pool refresh
 - Reopen only after an independently approved risk specification or replacement deterministic stress policy
- Approval:** Requires investment committee approval. No capital action is authorized.
- Analysis cutoff: 2026-08-29
